

First instal ubuntu

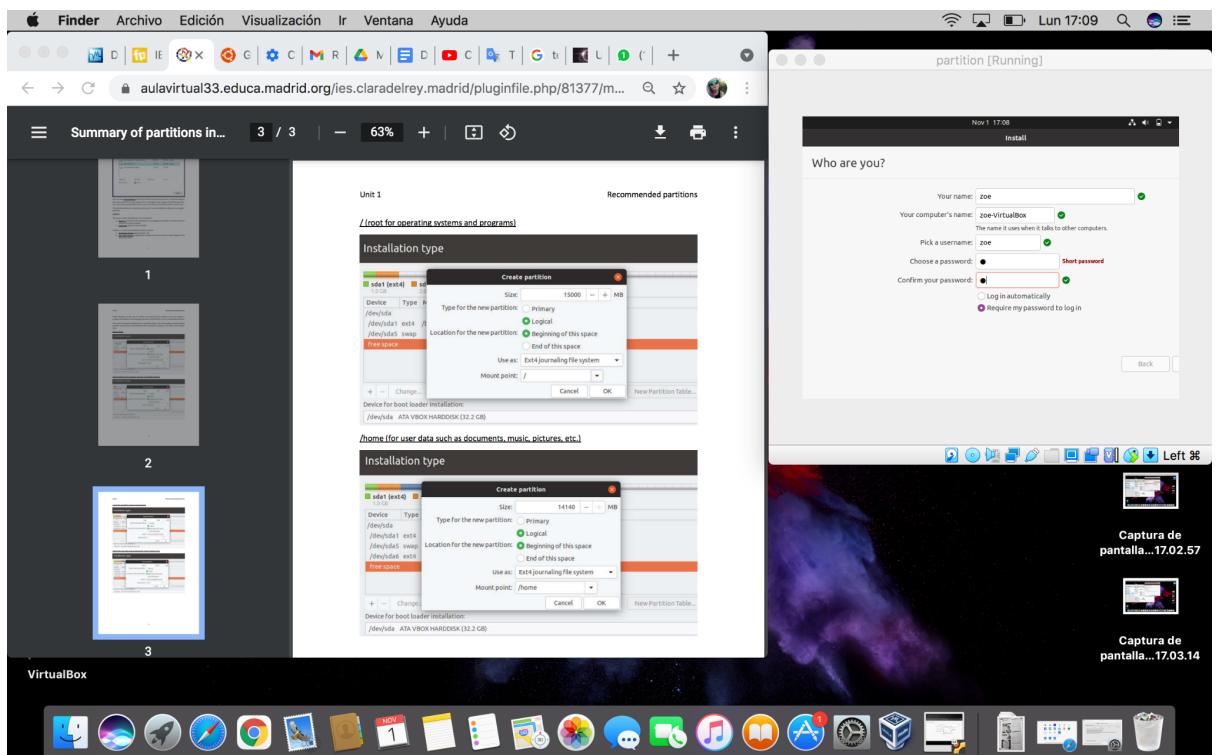

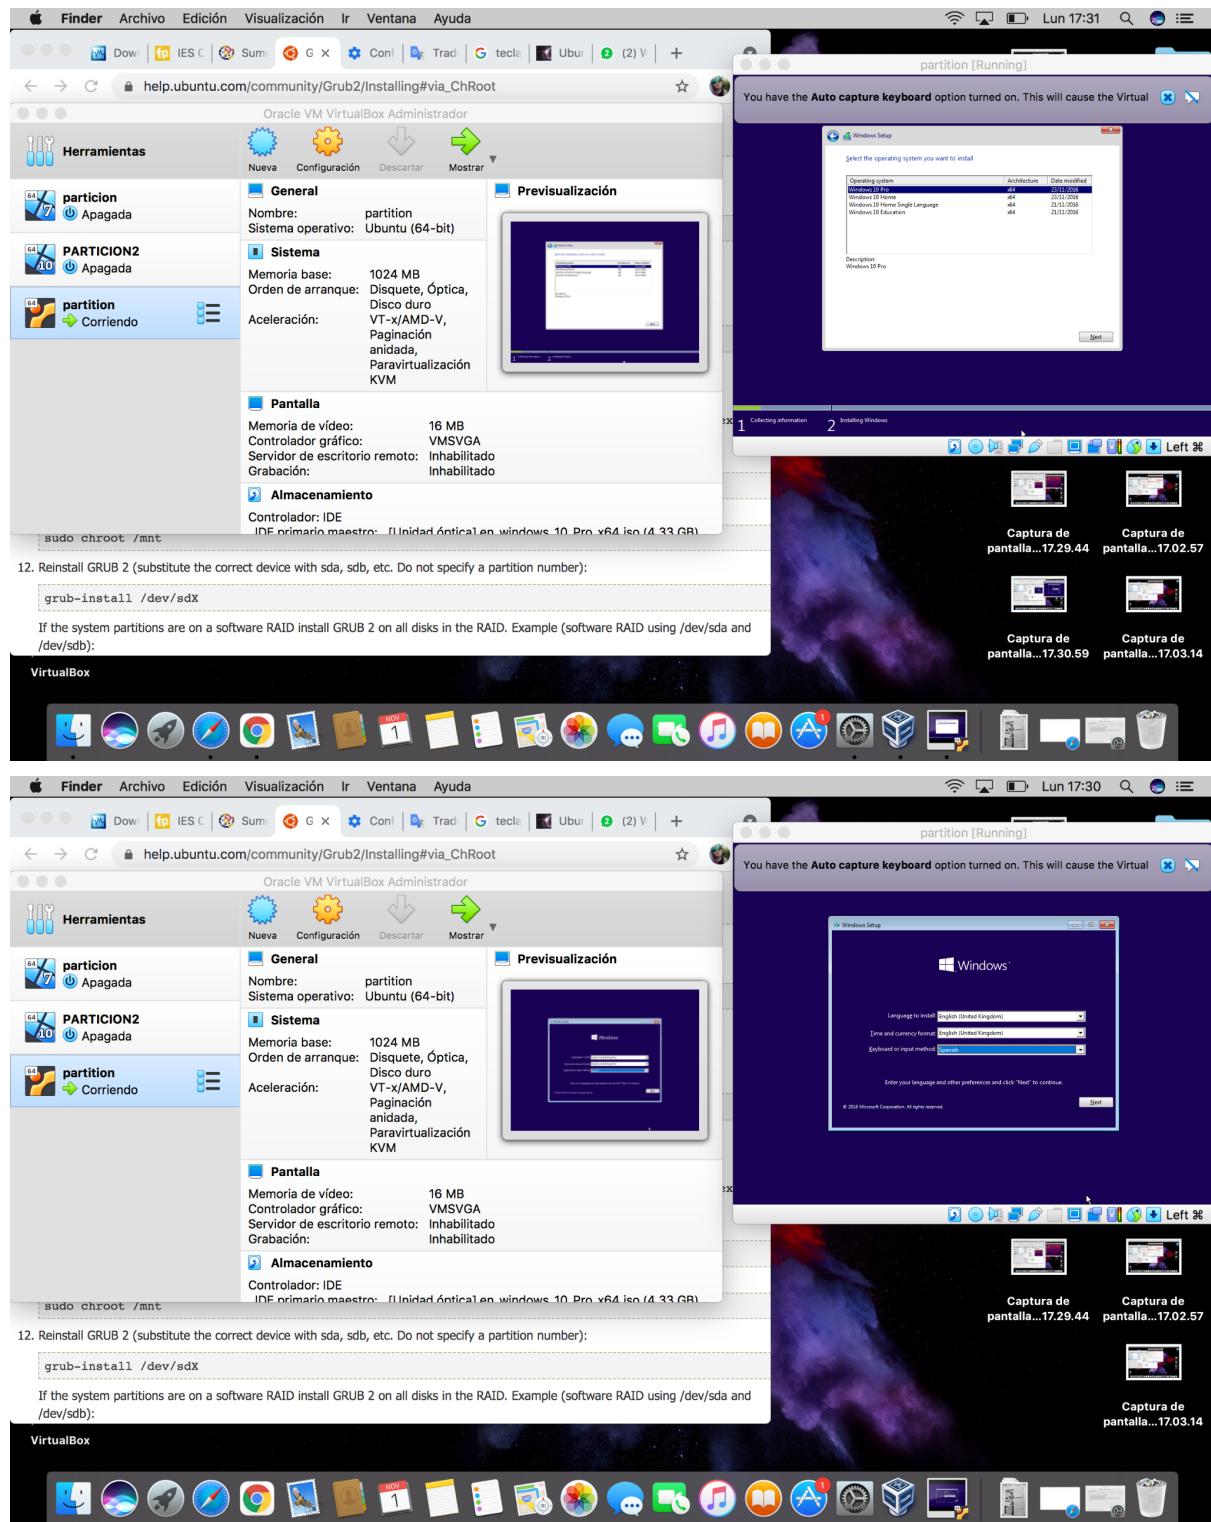

Make partitions

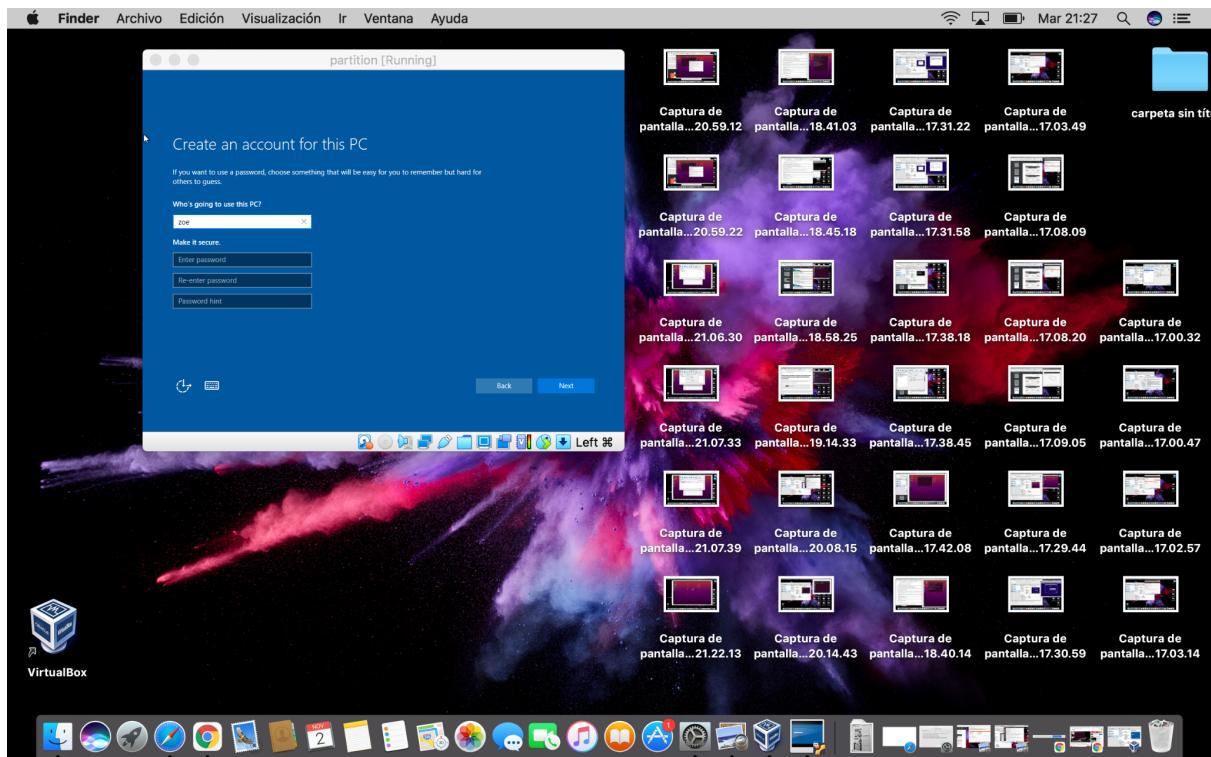

And then name the user and password

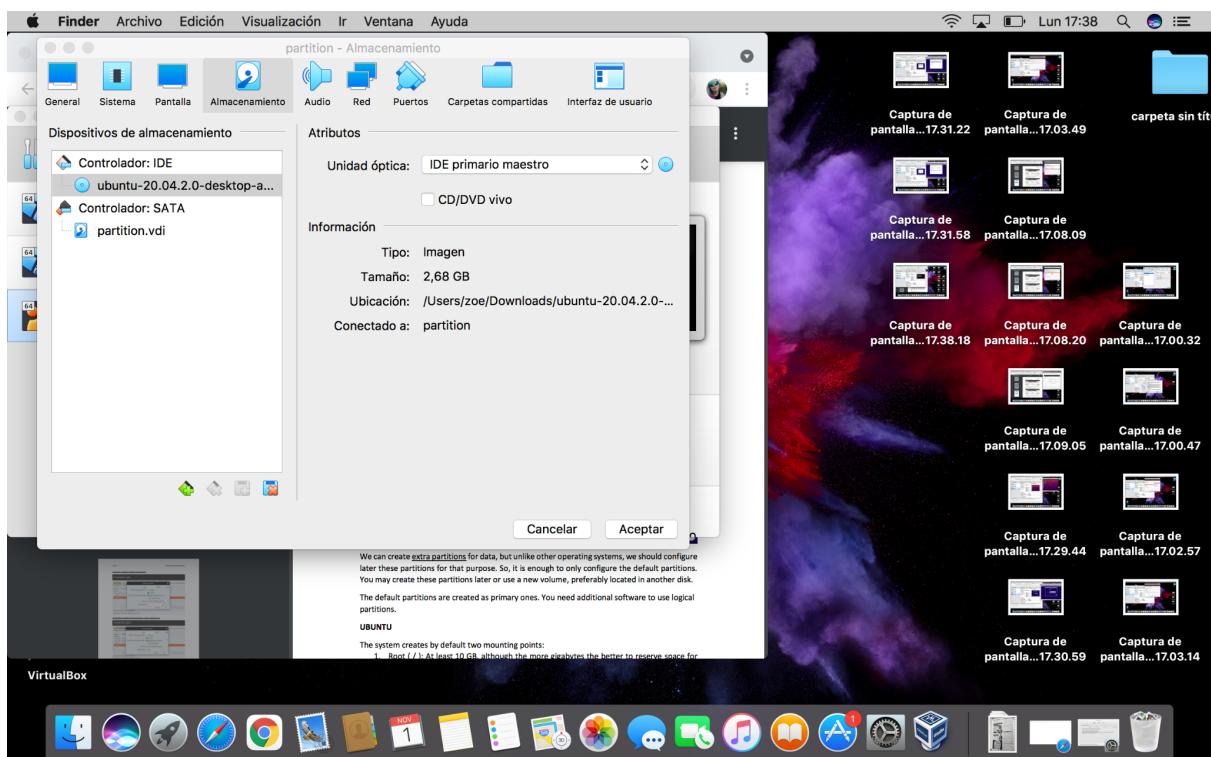

Second instal windows 10

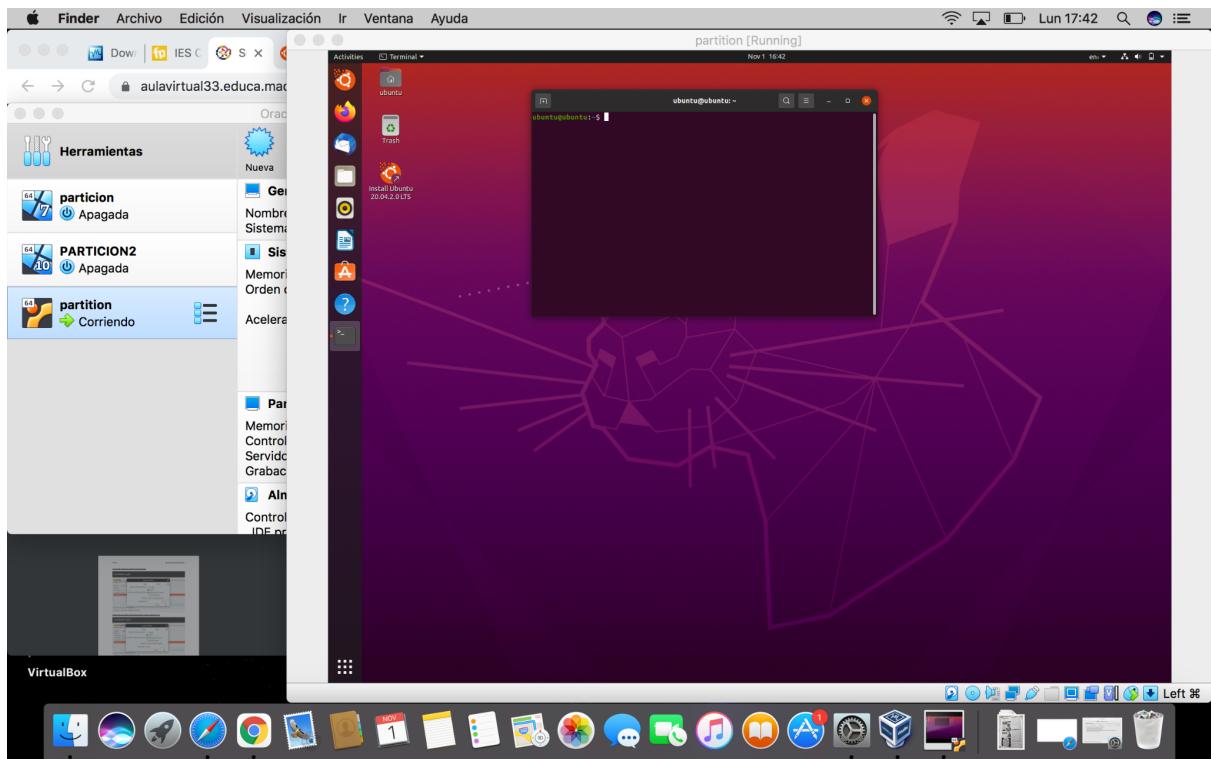

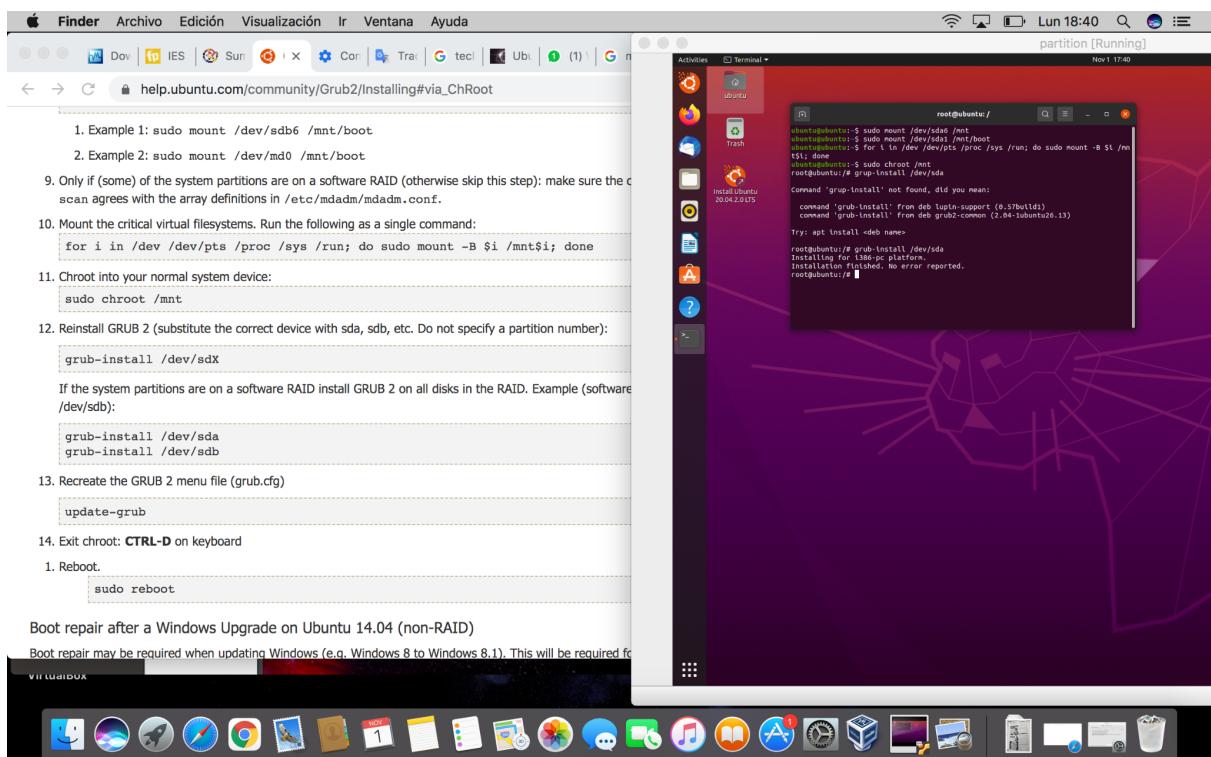

For can edit the terminal at ubuntu and make the rest part of the exercise, i need to change the sat disc for ubuntu.

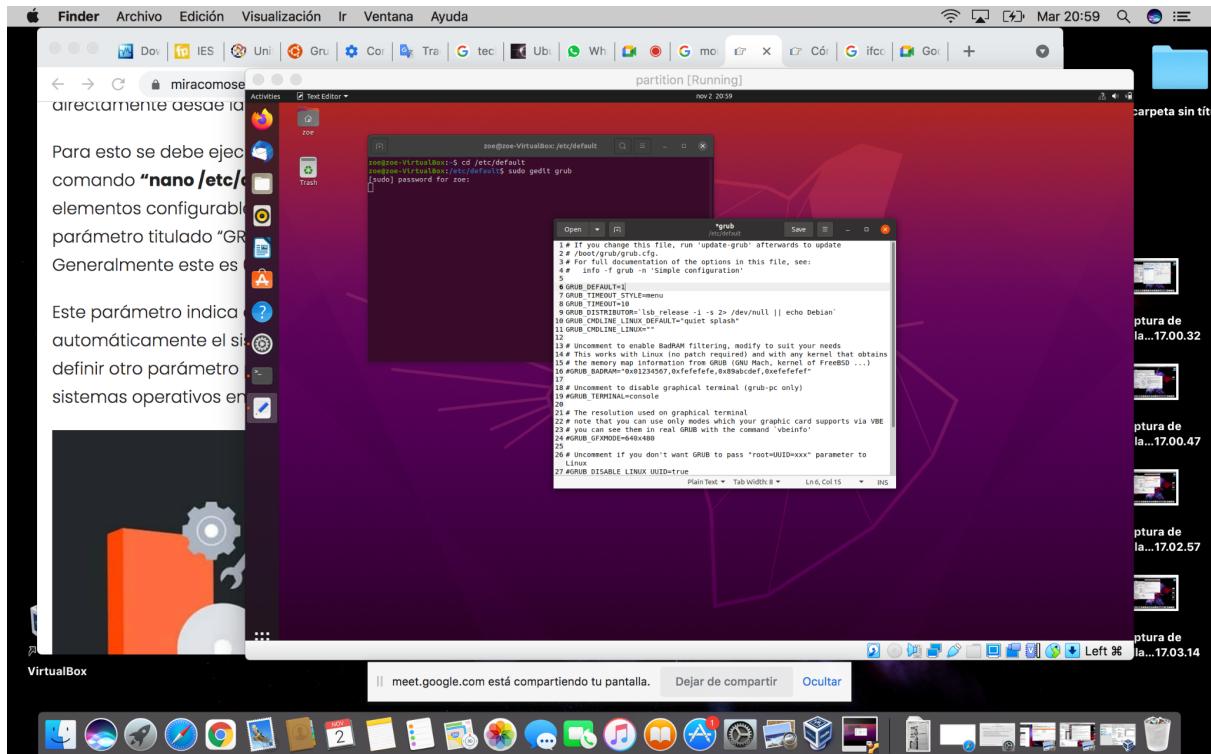

After start with try ubuntu and open the terminal for edit

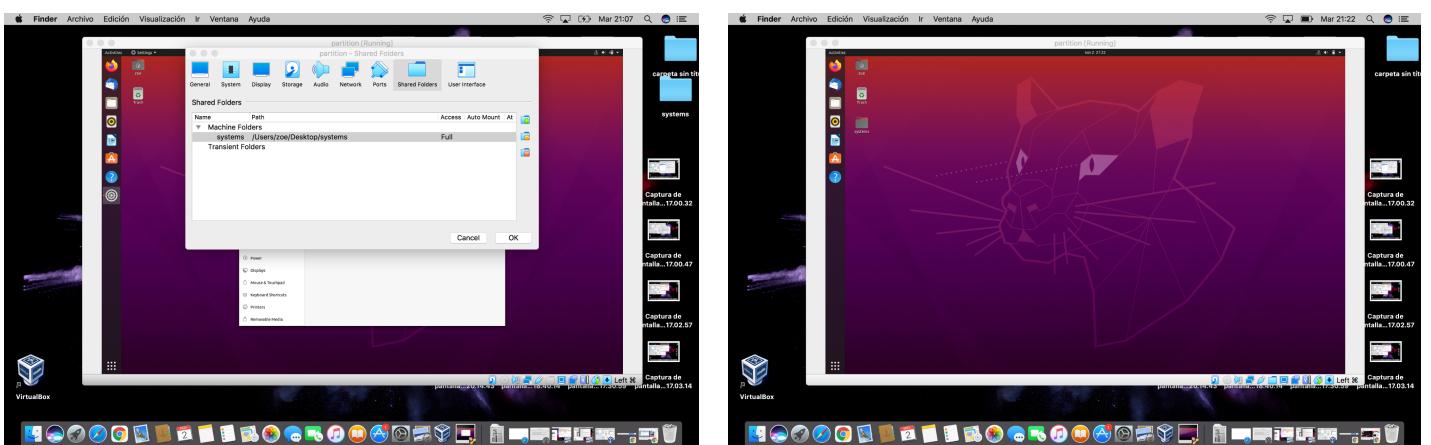

Put the code, for the menu of ubuntu start and can change from ubuntu to windows

At the terminal, open the grub and change the timeout for 10 sec, default for changes the predeterminate operating systems, and change timeout_style for hidden to menu for do that themenu don't appear a less that you press a key

To create a shared folder, you need to create a new folder at your external disk and after pressing the symbol of a folder at the bottom of the virtual machine and add a new folder, look for the new folder that you create and add it.

Postscript: i have done this on my mac laptop. If you need see my virtual machine, tell me to take my laptop for class. Thanks
